Gateway paring step

1. Find main menu at upper left corner

2. Select G2

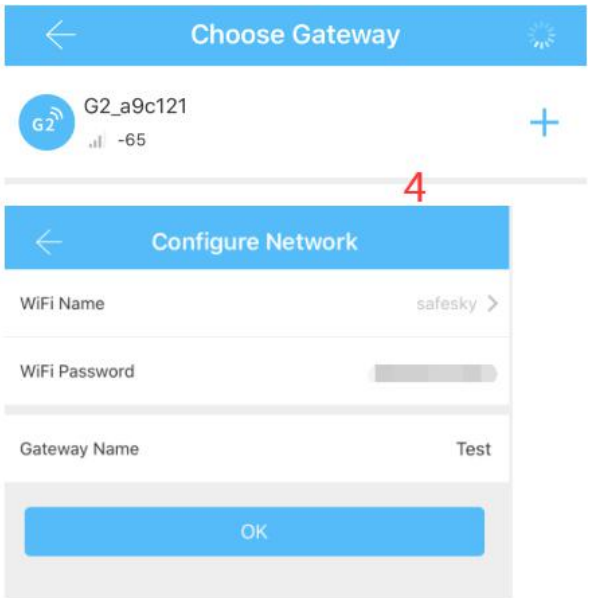

Please Note: Connect to power before entering step 3(After selecting step 2). Switching on the power too early will result in Search failed.

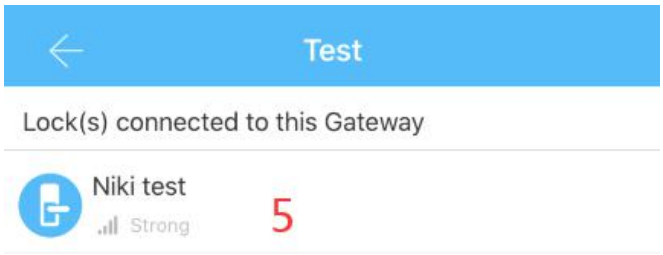

3. Find the gateway and click Next

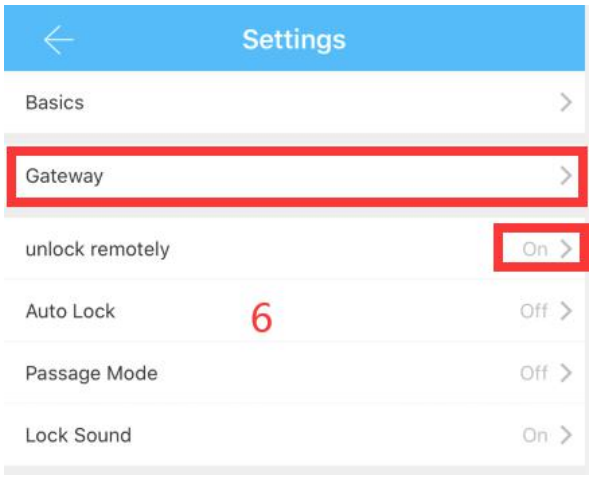

4. After identifying the gateway, click Add to enter the wifi configuration interface

5. Enter the wifi password, when the gateway name and signal appear, it means the matching successfully

6. After the match is successful, there will be a "Gateway" column in the APP settings, at the same time, you need to open "unlock remotely"

7. After opening the remote unlocking, there will be an additional lock button on the main interface, click to unlock remotely
