CAGE NUT INSTALLATION & REMOVAL GUIDE

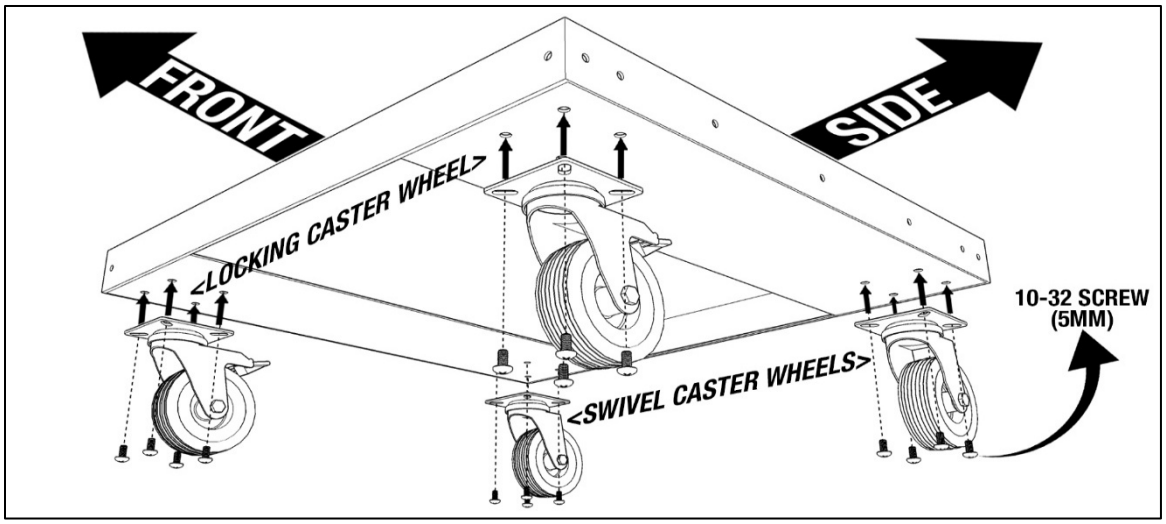

- **Identify the Position:** Choose the location in the rack where you want to install the **M5 Cage Nut (Q)**.
- **Insert the Cage Nut:** Hold the **M5 Cage Nut(Q)** with the flanged side facing the inside of the rack. Align it with the square hole and press or hook the opposite side until it secures in place. *Avoid installing the cage nut from the front exterior of the rack, as the design ensures a tight fit when properly installed from the inside.* *(Picture A, B)*
- **Remove the Cage Nut:** If you need to remove the cage nut, use the **Cage Nut Insertion Tool (O)**. Insert the tool into the cage nut hook and gently squeeze to release the tabs, then pull the cage nut out of the hole. *(Picture C, D)*

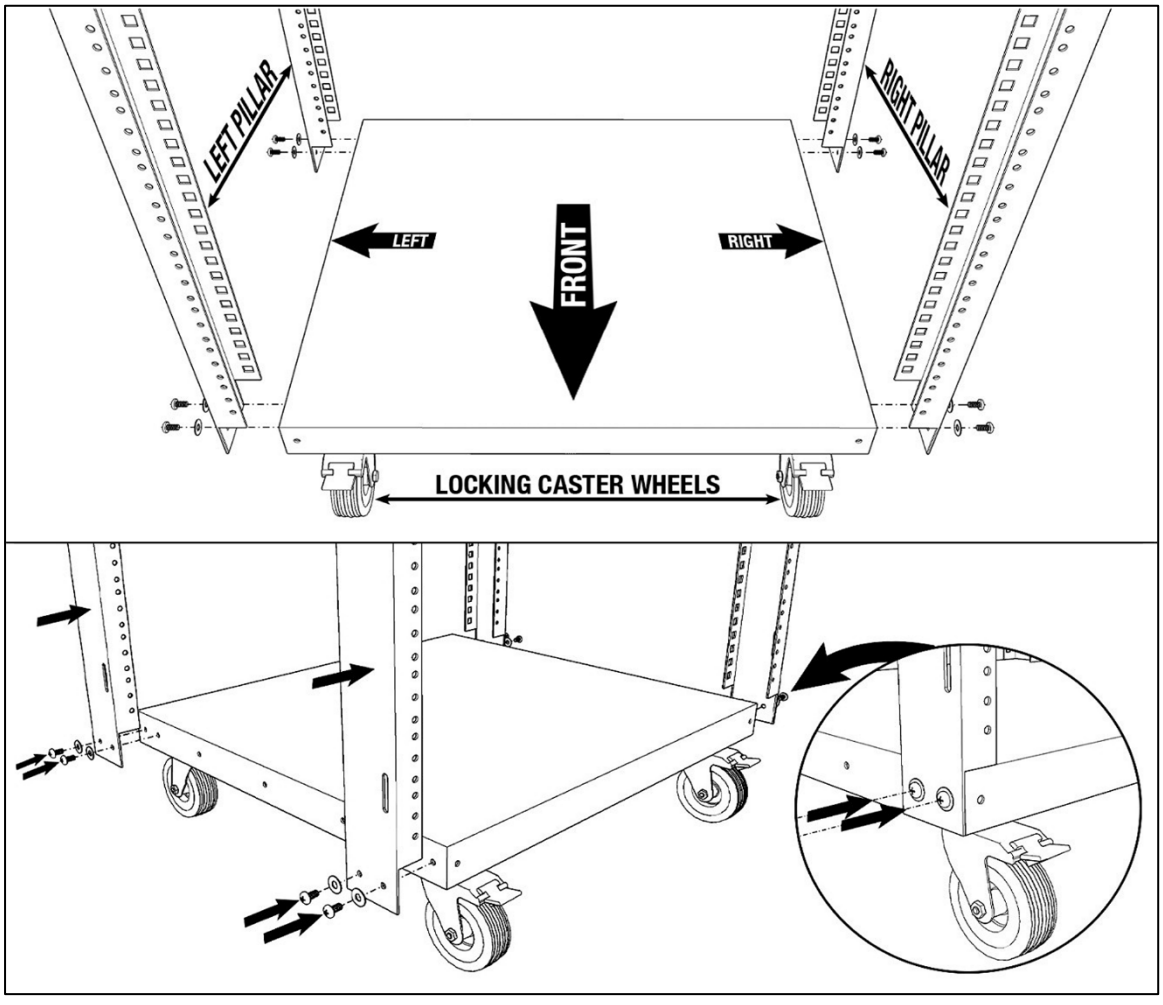

The remaining 10-32 Screw(L) you have are compatible with the M5 Cage Nut(Q) for installing your Rack and Shelf.

ASSEMBLY INSTRUCTIONS

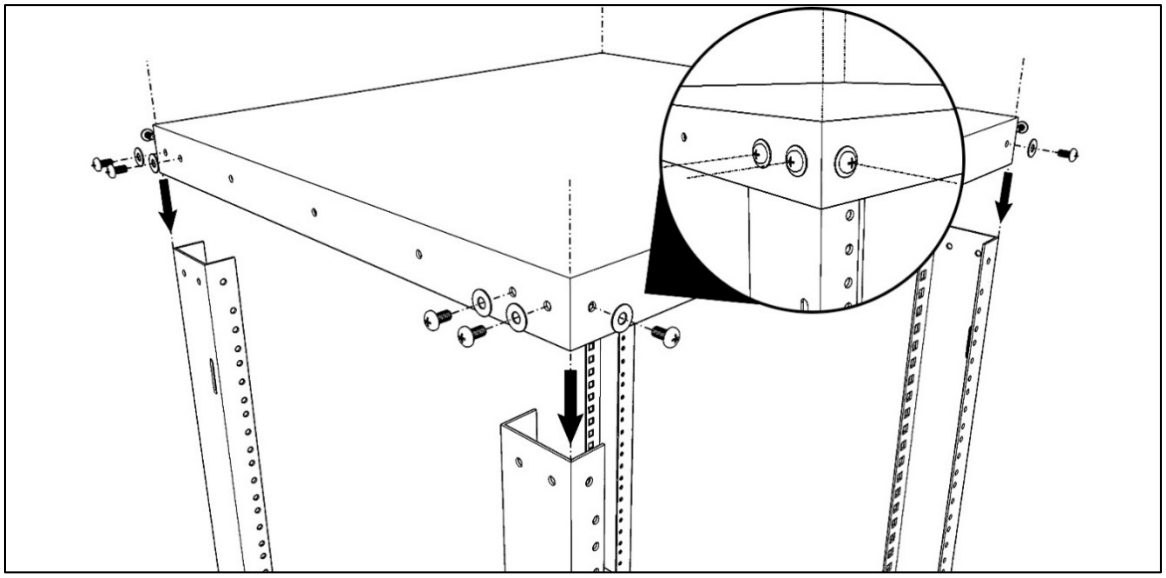

1. Secure the **Locking Caster Wheels (B)** to the front of the **Wheel Base (A)** and attach the **Swivel Caster Wheel (C)** at the rear using **10-32 Wheel screw (N).**

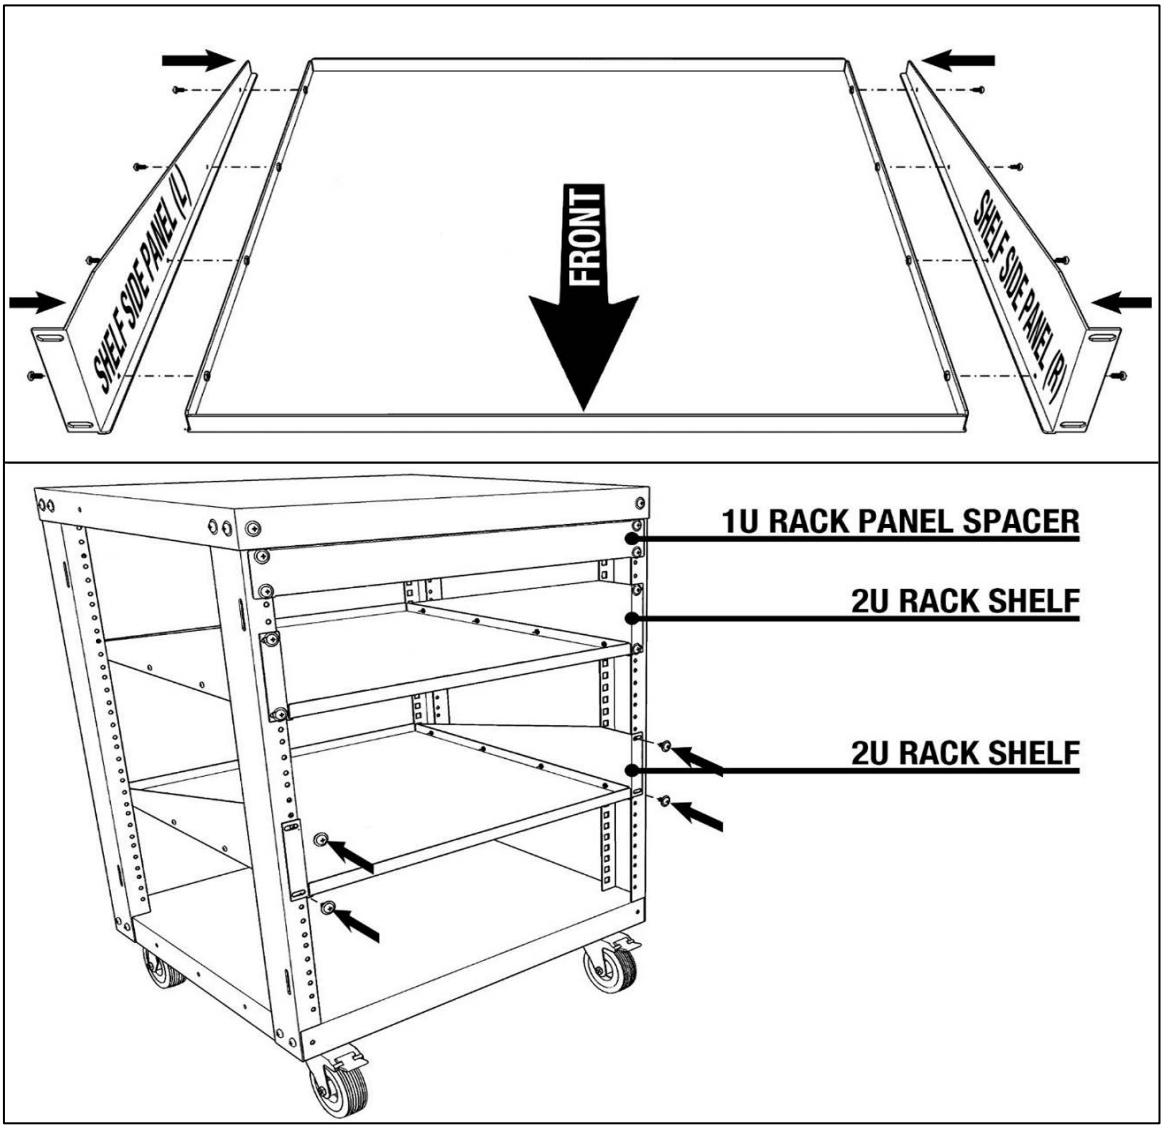

2. Attach **Corner Pillar (G)** to **Wheel Base (A)** using **10-32 Screw (L)** and **Flat Washer (M)**.

4. Rack Shelf Assembly: Secure the **Shelf Side Panel (I)(J)** to the **Rack Shelf (H)** with an **M4 Screw (K)**.

TIP:

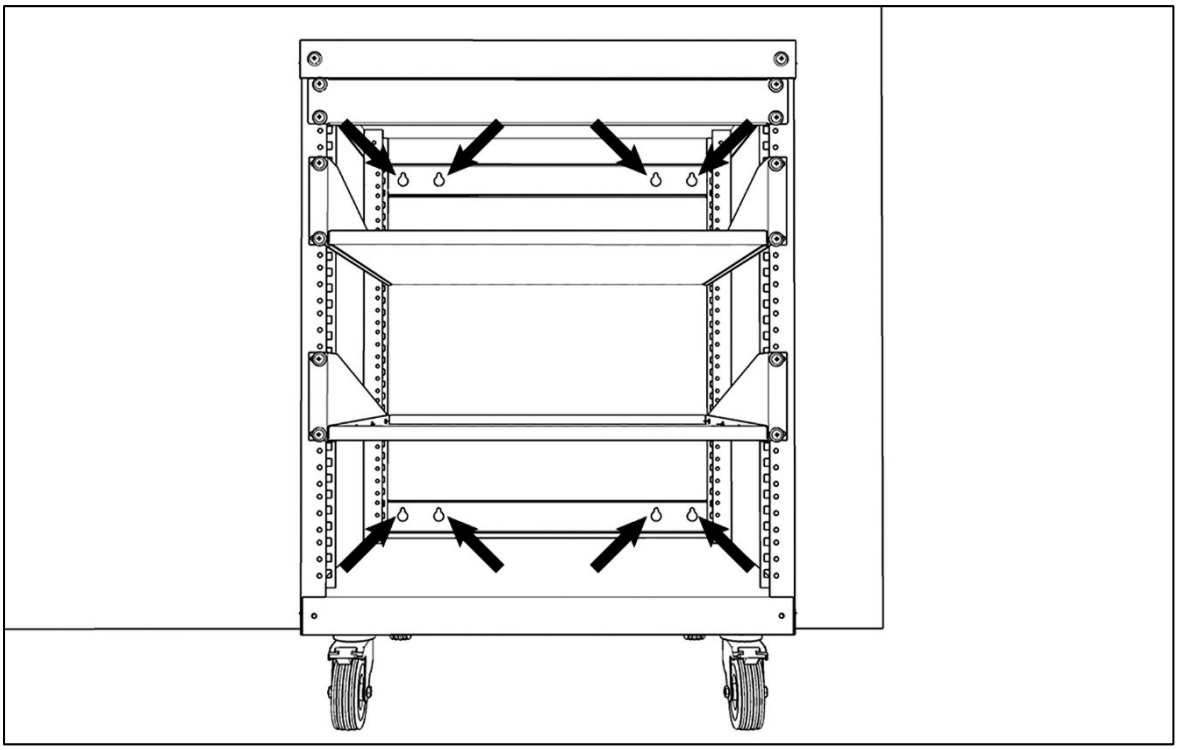

Each rack unit **"U"** corresponds to every **3 Holes** on the rack, starting from the top.

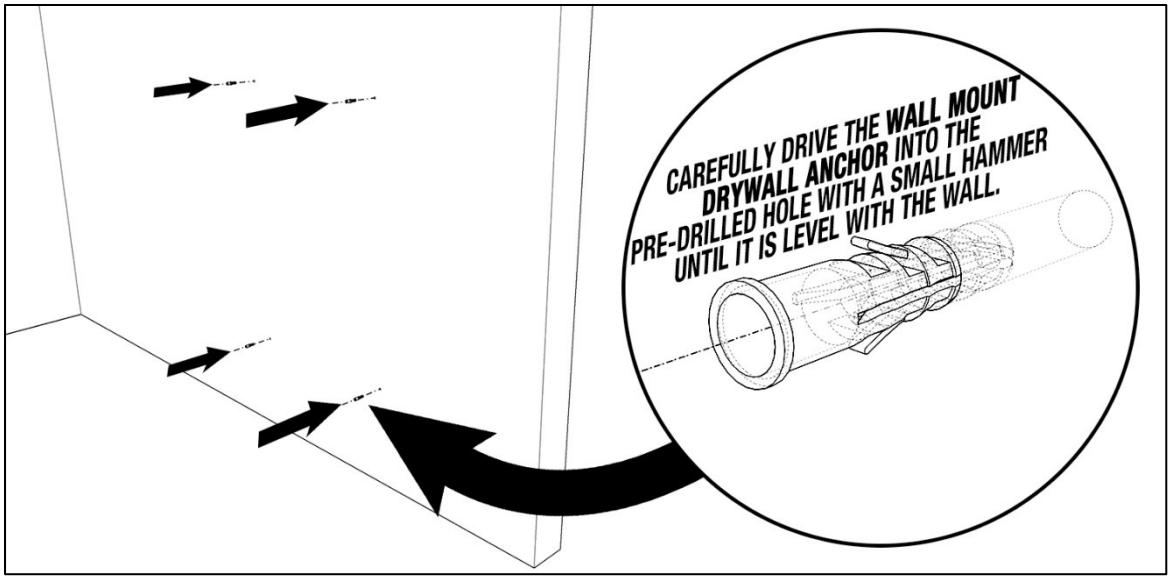

WALL MOUNT PANEL ATTACHMENTS

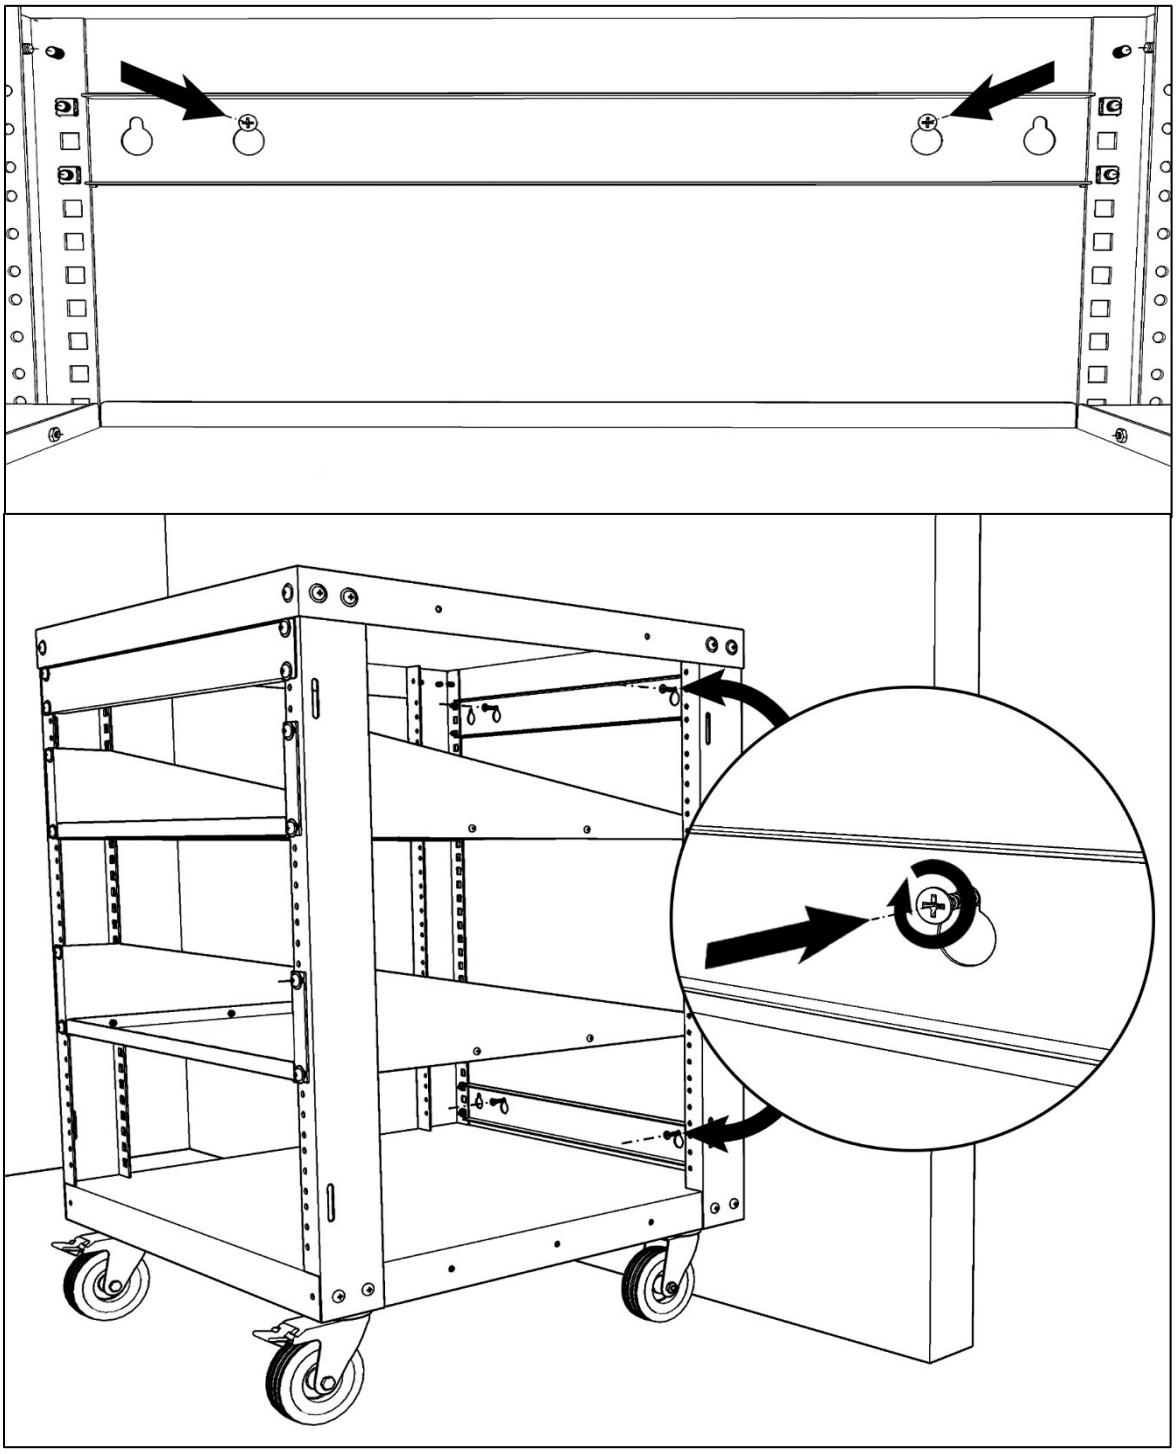

A. Start by ensuring the holes of the **Wall Mount Panel (F)** are aligned correctly. Take a moment to strategize and thoughtfully review the steps before you begin drilling.

B. Create a hole that is a bit smaller than the diameter of the **Wall Mount Drywall Anchor (R)** to guarantee a tight fit.

C. Place the **Wall Mount Panel (F)** over the pre-drilled holes, making sure it's properly aligned, and then fasten it by inserting and tightening the **Wall Mount Drywall Screws (S)**. This will provide a sturdy and reliable equipment rack.
