PRODUCT INSTRUCTIONS

一： Product overview

1. Product Name: Motorcycle voltage Regulator
2. Rated output voltage: 14.5V ± 0.5V
3. Rated output current: 8A
4. Rated output power: 90W

二、 Installation instructions:

(product function pin is shown in the picture)

Before using this product, first check whether the product of the original vehicle is consistent with this product, and check the positive and negative output of this product; Whether the AC input of magneto is consistent with the

circuit of the vehicle. It can be installed only after confirmation. Otherwise, it will ignite due to short circuit of power supply. Remember! At the same time, prevent short circuit caused by artificial modification of vehicle lines

三、 Precautions for use:

As this product is a power electrical component, it will generate heat during operation. It needs to be installed in a good position for ventilation and heat dissipation (generally, vehicles have a fixed position). It cannot be installed in the heat source place such as engine without authorization. In order to prevent the internal electronic components from burning out due to overheating of the product, warning: This product cannot be used for refitting electrical components!
