DEVICE SETUP

Requirements

● A Matter-compatible Thread hub (e.g., Apple HomePod, Apple TV, Samsung SmartThings Hub)
● The corresponding smart home app (e.g., Apple Home, SmartThings)
● A 2.4 GHz Wi-Fi network (for hub connectivity)

Before You Begin

● Ensure that your Thread hub is powered on and connected to your home network.
● Download or open the smart home app that corresponds to your Thread hub (e.g., Apple Home for HomePod, SmartThings for SmartThings Hub).
● Locate the Matter setup QR code, which can be found on the back of the product.

Step-by-Step Setup

(1)Power on the Device
Remove the battery insulation tab to power on the device.
(2) Enter Networking Mode
Once powered on, the green LED will flash rapidly (about 5 times per second), indicating the device is ready for network connection.
(3)Add Device via App
Open your smart home app, select “Add Device,” and scan the Matter setup QR code (located in the manual or on the product label).
(4)Connection Confirmation
● Successful Connection: The green LED remains steadily lit for 3 seconds, then turns off.
● Failed Connection: The green LED flashes slowly (about 2 times per second) for approximately 3 seconds.
(5)Press the Alarm to Ensure Proper Operation
● Press the Test button once.The alarm will sound locally, and a notification will be sent immediately to the user’s app.

Note:

● To enter networking mode, press and hold the Reset button for 5 seconds until the green LED flashes rapidly.
● To cancel the process, press the Reset button again. The green LED will flash slowly (twice per second) for 3 seconds and then turn off.
● To ensure your Smoke alarm is functioning properly, test it at least once a month

Tips:

● As the app is regularly updated, this manual may differ slightly from the on-screen instructions. Please follow the in-app guidance for the most accurate steps.
● For a reliable setup, we recommend adding the device to your Thread Hub before final installation. If you encounter issues, try moving the device closer to the hub.

DEVICE UPDATE

This alarm supports Over-the-Air (OTA) updates device's firmware version.Follow the update prompts displayed in the APP when a new firmware version is available.Ensure the device remains in standby mode and has sufficient battery power during the update process.
