How to connect Amazon Alexa to Zigbee shade motor

Voice Adding a device to a Zigbee network

◆

①

Connecting to Zigbee motor

If you have a Zigbee device that works with the Amazon Echo, you can start adding them Alexa:

- Start by asking Alexa, its voice assistant to "Discover devices."
- If the device is one that's compatible, Alexa will locate it within seconds, and connect on its own.
- Next, name the device in the Alexa app, such as Living Room shade
- Start adding the device to Routines

②

Select "Device"- "All Device", and then tap "First Device".
The details of the device will be displayed Detailed information, as shown in the third picture, "RAEXsmart device" and "Window blinds", indicates Raex curtain products.

③ Curtain voice control command:
At this point you will be able to operate your Zigbee device through Alexa, such as:"Alexa, turn on Living Room shade"
eg:Open first device to 50%(Turn off the first device to 50%)

◆ APP Adding a device to a Zigbee network

①

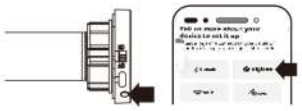

Tap on "More" on the navigation bar.
Choose "Add a device"

②

Choose "Other"

③

Press the motor [setting button],"four short and one long", choose "zigbee"logo

④

Tap "Discover Devices" in the Alexa app

⑤

In the device distribution network, tap "All Devices" to check whether there is a device and choose "Find new device" to see the details of the device. If "Raex smart device" and "Window Blinds" are displayed, the device is connected successfully.

◆Delete device

Choose the device you want to delete, for example, Second device, and tap in the top right-hand corner to delete the device. .
