MPCGPS4 Quick Setup Guide and Tips

Warning: Always refer to and read the full User Manual before use.

Step 1 – Install the APP and Charge the Collar

Download and install the My Pet Command / My Pet Fence APP on your smartphone (Refer to Manual). Before first use, fully charge the collar for 3–4 continuous hours.

Step 2 – Connect and Name Your Collar

Open the APP and connect your collar via Bluetooth. Make sure your phone's Bluetooth, Location Services, and Internet are all enabled. Once connected, assign a name to your collar. Make sure your collar is close to your phone (Bluetooth range up to approx. 10 meters only)

Step 3 – Create Your Fence Boundary

Draw your virtual fence as either a circular or 6-sided polygon shape. Tap Finish to save your fence — it will be stored directly on the collar.

Note: The APP will not allow fences smaller than ½ acre, and your total property area must be at least ¾ acre in size. This is not meant for properties smaller than this acreage

Step 4 – Acquire GPS Signals

While still connected to your collar via Bluetooth, take the collar outdoors with a clear view of the sky. Always allow 1–3 minutes for the collar to lock onto GPS satellite Sky signals when collar comes outside

Step 5 – Test Your Fence

Once the collar has locked onto satellites, check the dog positioning icon on your APP map which only appears when collar is outside and locked onto satellites. Walk around the boundary area to verify the fence position and make any necessary adjustments to your fence as required

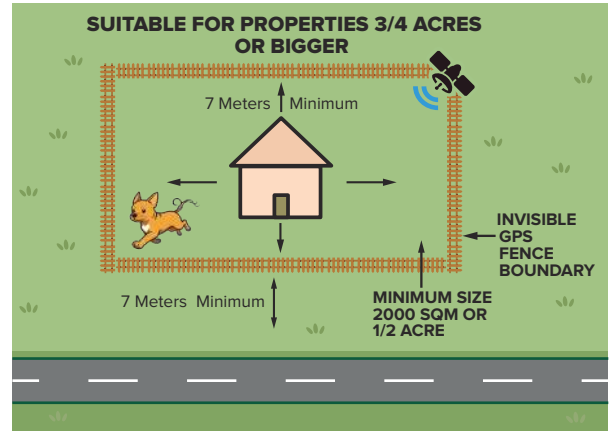

Step 6 – Train Your Dog

After confirming your fence setup, perform the initial dog training using the manual remote if needed. Then, securely place the collar on your dog before normal use.

General Information and Tips

- This collar is not a live tracking system. Once the fence is set up and saved, the collar operates independently without needing to stay connected to the APP.
- Recharge the collar every 24 hours. Before each use, take the collar outside and allow it to reconnect to satellite signals before putting it on your dog.
- Designed for outdoor fences only. Always allow for minor distance variations in GPS positioning. Refer to this diagram for visual guidance. Dogs can roam freely indoors and when indoors collar will not position itself and no positioning Icon will appear on Map when collar is indoors or in area with weaker/no Satellite signals
