UVC Camera Software Manual

Date	Version	Description
2023-10-19	V1.0	First Released

Support: support@inno-maker.com
Bulk Price: sales@inno-maker.com
Wiki: wiki.inno-maker.com
Github: https://github.com/INNO-MAKER

1 Description

- UVC cameras comply with UVC protocol and work with web-camera applications out-of-box
- UVC Cameras support windows, linux, MacOs Compatible with UVC drivers

1.1 What is UVC Camera

- UVC Camera is camera with a USB interface that meets the standards set for the USB Video Class. This means that every UVC Camera is a USB camera, but not all USB cameras are UVC Cameras, because they might adopt the USB interface without meeting the Video class requirements.
- Therefore, a major advantage of the UVC cameras is their universal compatibility and flexibility. As they meet the video class standard, you can easily use them on different platforms with a USB port without handling the driver issue, like the Raspberry Pi or a smartphone. It also makes it easier for you to migrate your applications from one platform to another.
- At present, our UVC cameras support Windows, Linux, MAC, and Android systems, but do not support the iPhone system.

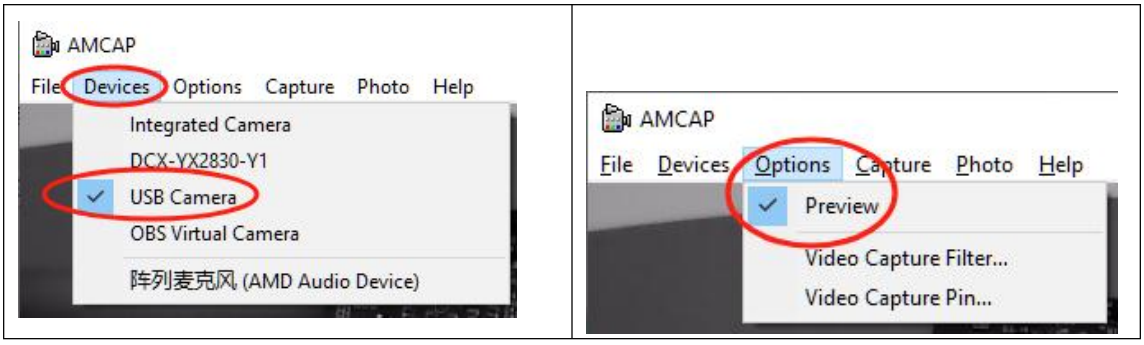

2 Works on Windows

2.1 AMCAP

AMCAP is a free and easily use UVC Camera test tools.

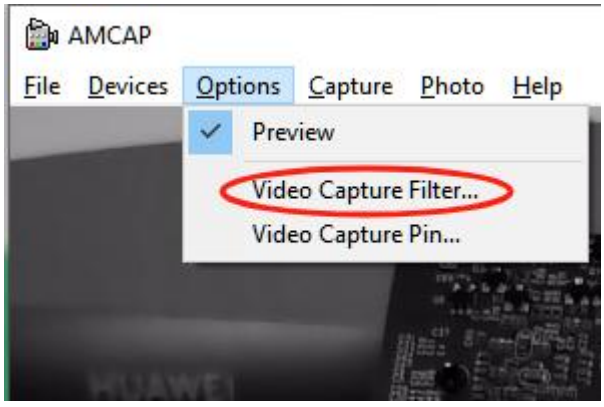

2.1.1 Preview

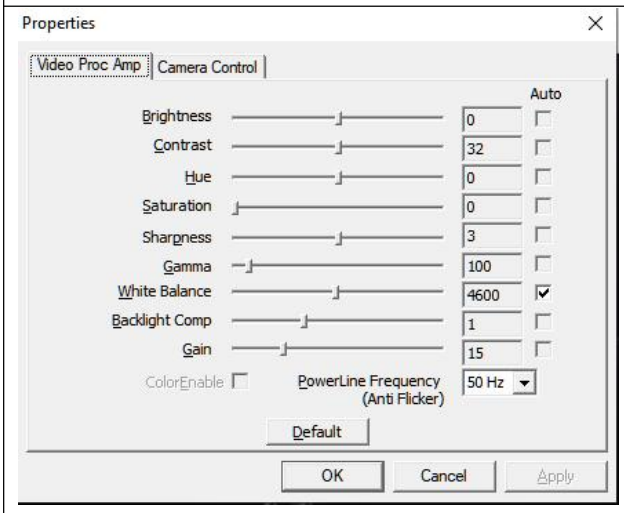

Open AMCAP.EXE, Select USB Camera From “Devices”, Select “Preview” from “Options”

2.1.2 Video Capture Filter

You Can find most of Controllable Parameters from “Options”, “Video Capture Filter”.

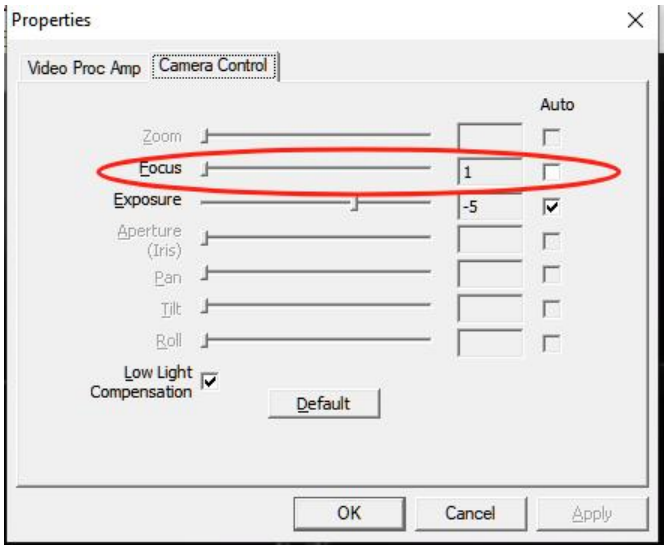

Brightness,Contrast,Hue,Saturation,Sharpness,Gamma,White Balance,Backlight Comp,Gain,Exposure,PowerLine Frequency,Low Light Compensation

2.1.3 External Trigger Parameters

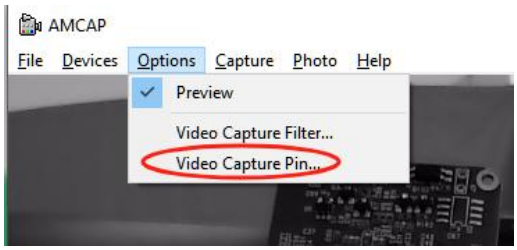

From “Video Capture Filter” “Camera Control” ,The “Focus” Parameter is for external trigger

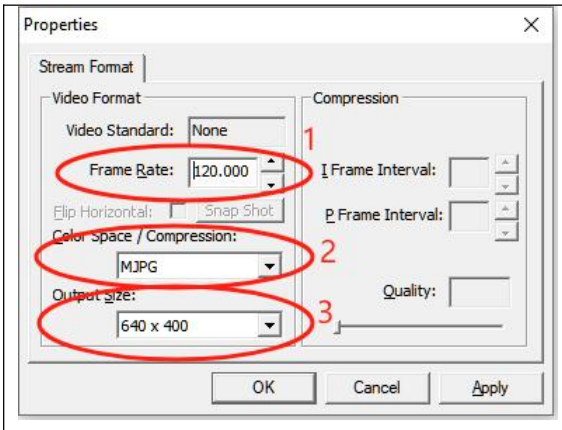

signal Enable.

2.1.3 Video Capture Pin

You Can find most of Controllable Parameters from "Options", "Video Capture Pin".

1	You can chage Frame rate
2	Choose Output format like MJPG/YUV2
3	Choose Resolution Camera

2.1.4 Status Bar

You can find live frame Rate, Output Resolution

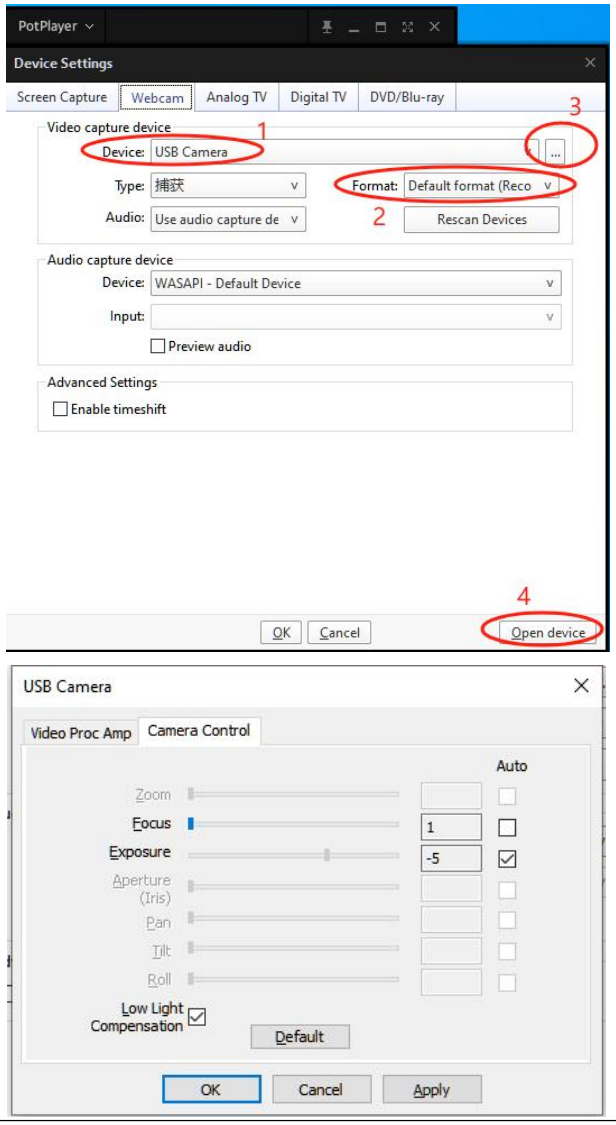

2.2 PotPlayer

Potplayer is another free Windows Tools which easily get video and images of UVC and U3V,UVC3.0 Cameras.

2.2.1 Open UVC Camera

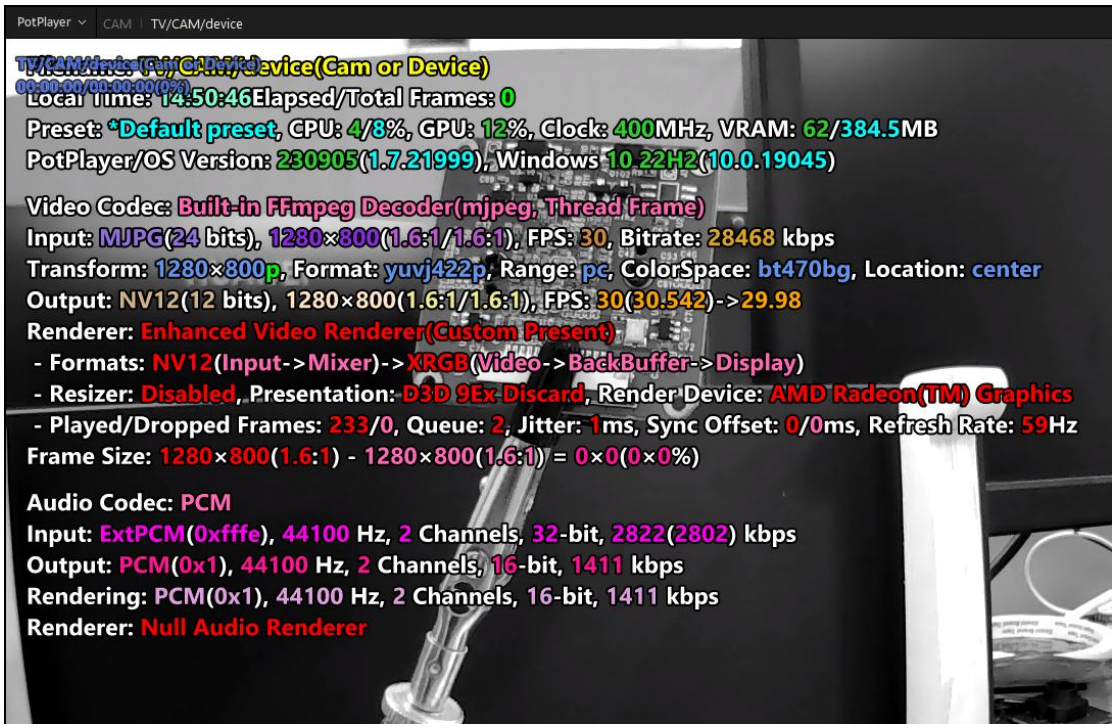

Use Shortcut Key **ALT+D** open window as above

1	Choose UVC Camera Deivce
2	Choose Output format ,resolution,frame rate
3	Camera Parameters Settings
4	Open Device

2.2.2 Live Working Status

Use shortkey TAB Open window as below

2.3 OpenCV Python

2.3.1 Install Python3

Download from below link,check from cmd.exe after install successfully

https://www.python.org/downloads/release/

```
python --version
```

```
pip --version
```

```
C:\Users\zhouj>python --version
Python 3.11.6
```

```
C:\Users\zhouj>pip --version
pip 23.3 from C:\Users\zhouj\AppData\Local\Packages\P
packages\Python311\site-packages\pip (python 3.11)
```

2.3.2 Install numpy

```
pip install numpy
```

2.3.3 Install Opencv

```
pip install opencv-python
```

If you have error for installing, update your pip by below command:

```
python -m pip install --upgrade pip
```

2.3.4 Run OpenCV Python

Example1:

```
import cv2

cv2.namedWindow("preview")
vc = cv2.VideoCapture(0)

if vc.isOpened(): # try to get the first frame
    rval, frame = vc.read()
else:
    rval = False

while rval:
    cv2.imshow("preview", frame)
```

```
        rval, frame = vc.read()
        key = cv2.waitKey(20)
        if key == 27: # exit on ESC
                break

vc.release()
cv2.destroyWindow("preview")
```

Example2：

```
# import the opencv library
import cv2

# define a video capture object
vid = cv2.VideoCapture(0)

while(True):

        # Capture the video frame
        # by frame
        ret, frame = vid.read()

        # Display the resulting frame
        cv2.imshow('frame', frame)

        # the 'q' button is set as the
        # quitting button you may use any
        # desired button of your choice
        if cv2.waitKey(1) & 0xFF == ord('q'):
                break

# After the loop release the cap object
vid.release()
# Destroy all the windows
cv2.destroyAllWindows()
```

2.3.5 Cited information

You can refer to the below link for any updates:

https://stackoverflow.com/a/606154
https://www.geeksforgeeks.org/python-opencv-capture-video-from-camera/

3 Works on Linux

3.1 Guvcview

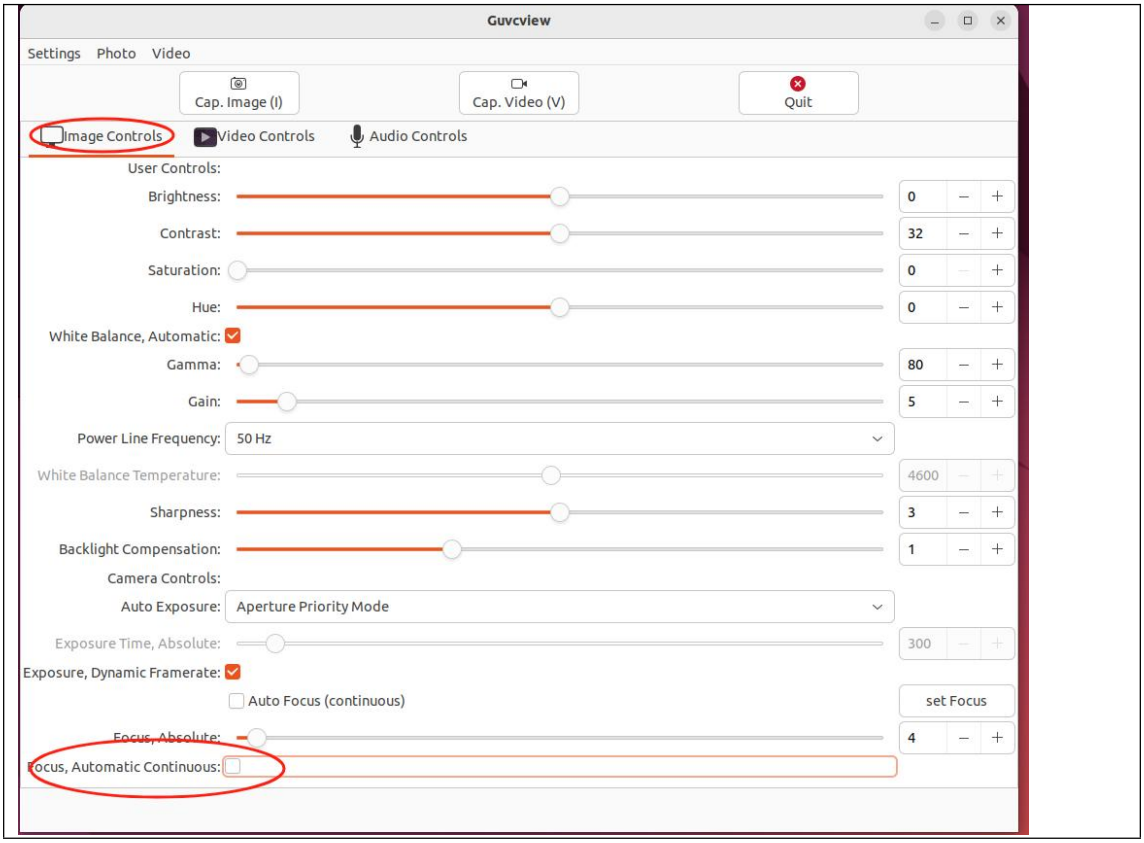

3.1.1 Install

Guvcview is free and easy operation tools for linux, Install and run :

```
sudo apt install guvcview
```

```
sudo guvcview
```

3.1.2 Image Controls

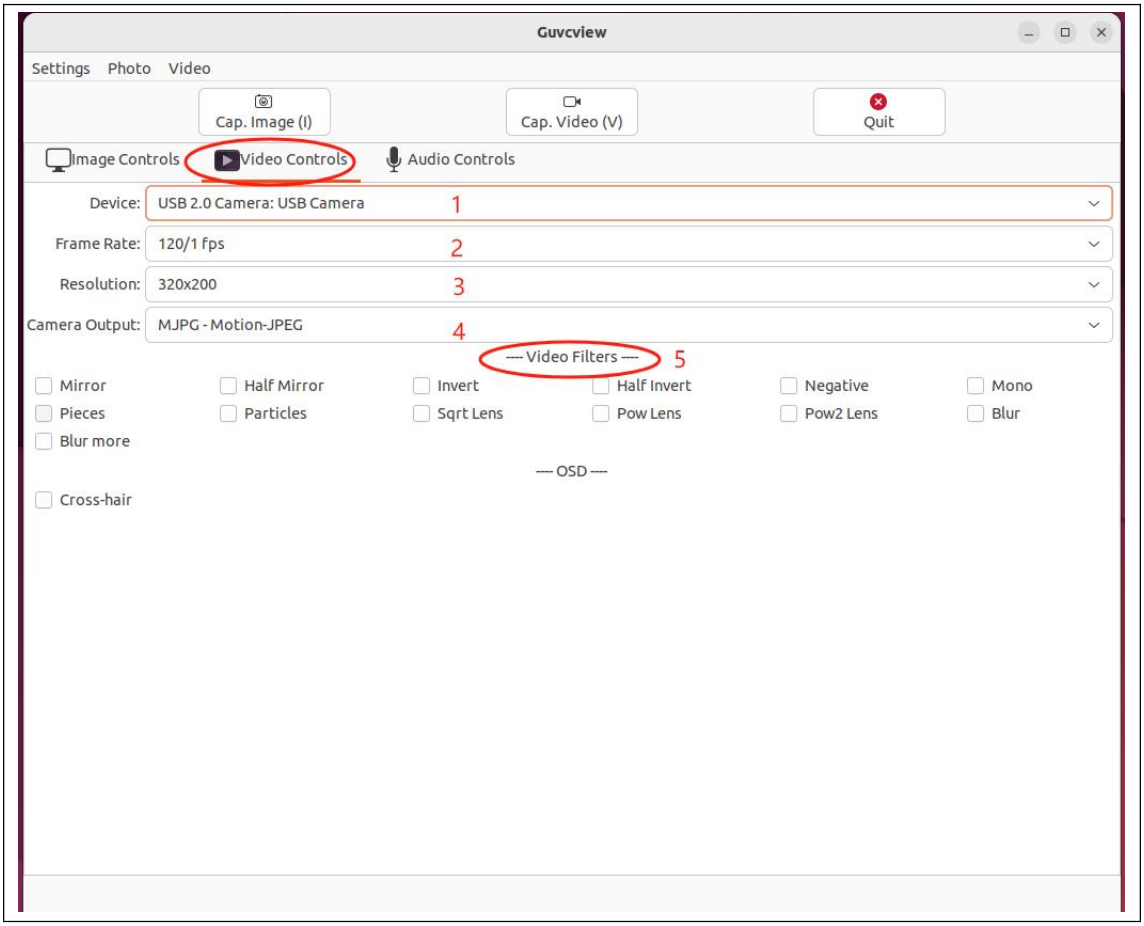

You can find the control parameters from Image Controls.

3.1.3 External Trigger Control

Focus,Automatic Continuous is for external trigger. Uncheck it to enable external trigger mode.

3.1.4 Video Controls

From Video Controls,

1	Select Device
2	Select Frame Rate
3	Select Resolution
4	Select Output format
5	Video Filters

3.2 qv4l2

3.2.1 Install

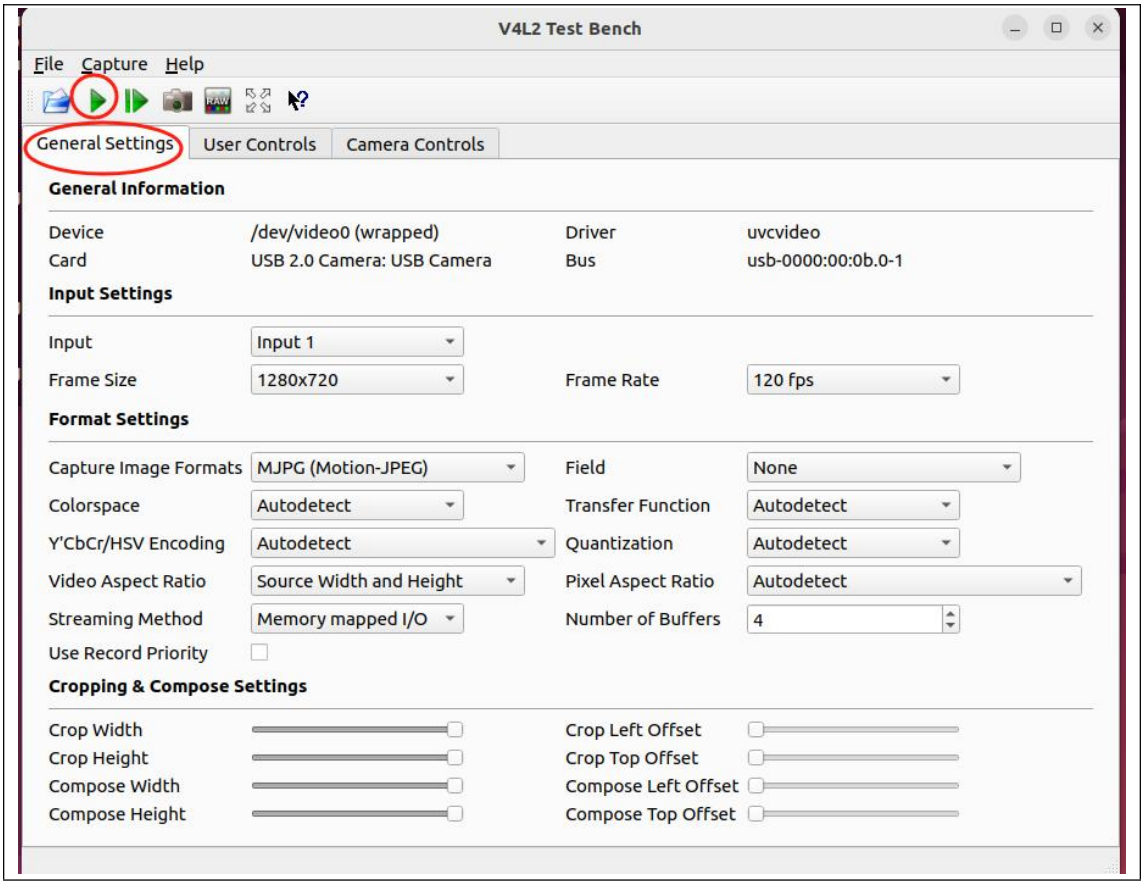

qv4l2 is free and easy operation tools for linux, Install and run :

```
sudo apt install qv4l2
```

```
sudo qv4l2
```

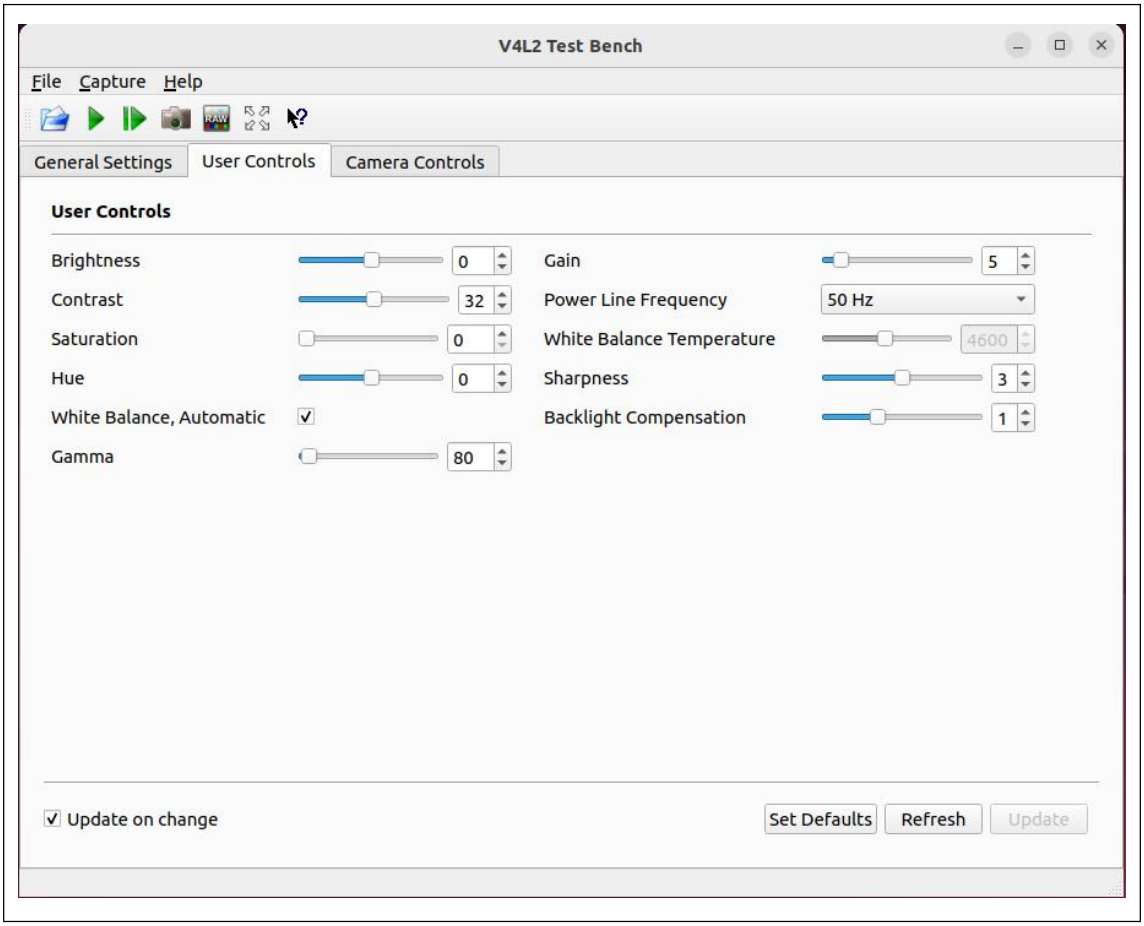

3.2.2 General Settings

Choose Output Devices, Resolution, Frame Rate

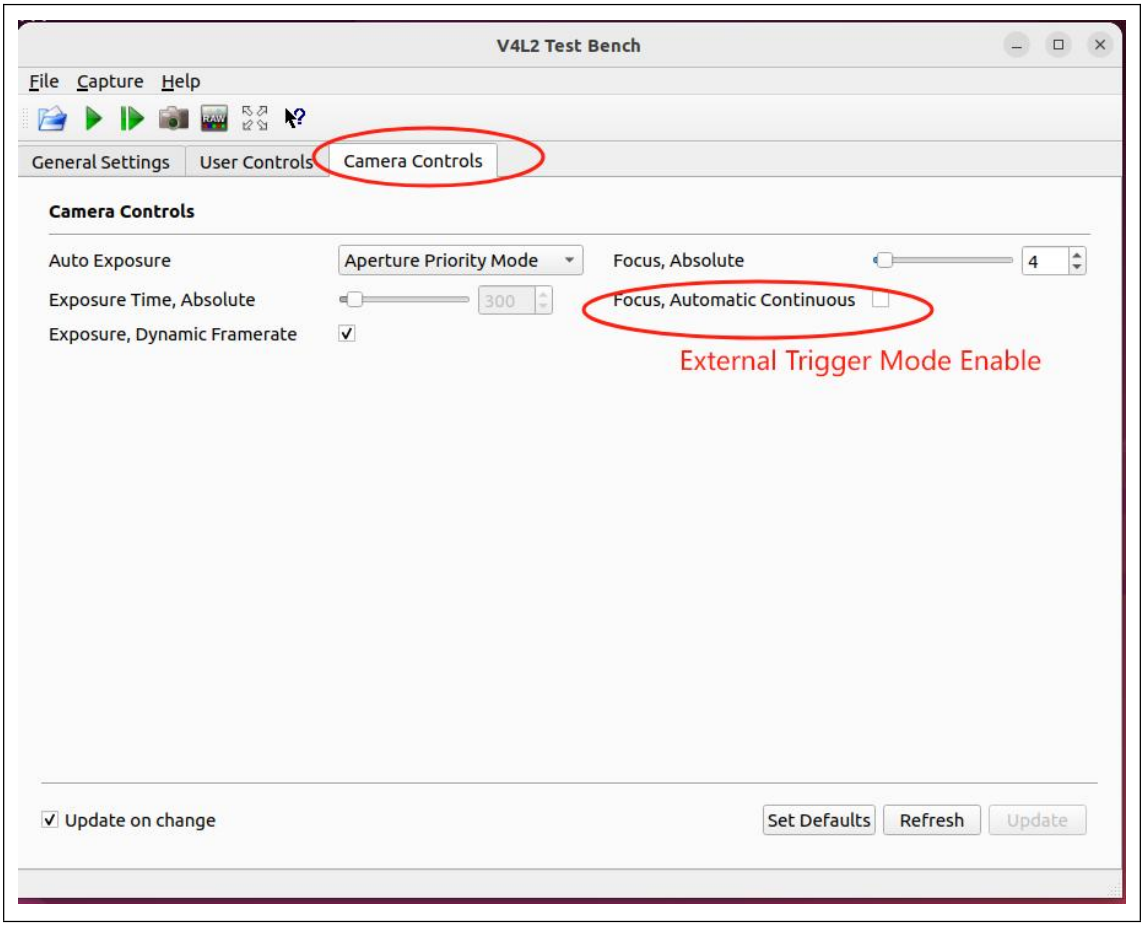

3.2.3 User Controls

control parameters

3.2.4 Camera Controls

You can uncheck the External Trigger from this options.

3.3 V4L utility Tools

3.3.1 Install V4L utility packages

```
sudo apt-get update
sudo apt-get install v4l-utils
```

3.3.2 List UVC devices

```
v4l2-ctl --list-devices
```

```
joez@joez-VirtualBox:~$ v4l2-ctl --list-devices
USB Camera: USB Camera (usb-0000:00:0c.0-2):
        /dev/video0
        /dev/video1
        /dev/media0
```

3.3.3 List the supported formats

v4l2-ctl --list-formats -d

```
joez@joez-VirtualBox:~$ v4l2-ctl --list-formats -d 0
ioctl: VIDIOC_ENUM_FMT
        Type: Video Capture

        [0]: 'MJPG' (Motion-JPEG, compressed)
        [1]: 'YUYV' (YUYV 4:2:2)
```

3.3.4 List resolutions and frame

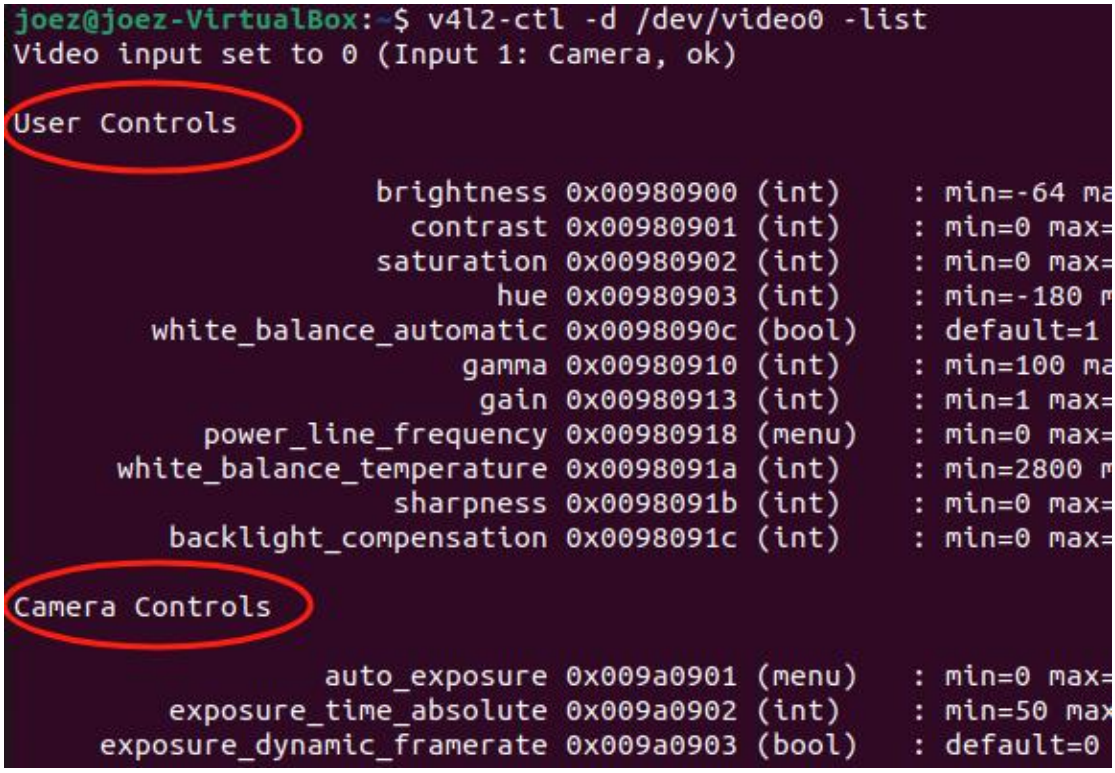

v4l2-ctl --list-formats-ext -d 0

```
joez@joez-VirtualBox:~$ v4l2-ctl --list-formats-ext -d 0
ioctl: VIDIOC_ENUM_FMT
        Type: Video Capture

        [0]: 'MJPG' (Motion-JPEG, compressed)
                Size: Discrete 640x480
                        Interval: Discrete 0.033s (30.000 fps)
                        Interval: Discrete 0.033s (30.000 fps)
                Size: Discrete 800x600
                        Interval: Discrete 0.033s (30.000 fps)
                Size: Discrete 1024x768
                        Interval: Discrete 0.033s (30.000 fps)
                Size: Discrete 1280x720
                        Interval: Discrete 0.033s (30.000 fps)
                Size: Discrete 1920x1080
                        Interval: Discrete 0.033s (30.000 fps)
        [1]: 'YUYV' (YUYV 4:2:2)
                Size: Discrete 1920x1080
                        Interval: Discrete 0.200s (5.000 fps)
                Size: Discrete 640x480
                        Interval: Discrete 0.033s (30.000 fps)
                Size: Discrete 800x600
                        Interval: Discrete 0.050s (20.000 fps)
                        Interval: Discrete 0.067s (15.000 fps)
                        Interval: Discrete 0.100s (10.000 fps)
                        Interval: Discrete 0.200s (5.000 fps)
                Size: Discrete 1024x768
                        Interval: Discrete 0.200s (5.000 fps)
                Size: Discrete 1280x720
                        Interval: Discrete 0.100s (10.000 fps)
                        Interval: Discrete 0.200s (5.000 fps)
                Size: Discrete 1280x1024
                        Interval: Discrete 0.200s (5.000 fps)
```

3.3.5 List Control parameters

v4l2-ctl -d /dev/video0 -list

3.3.6 Set User/Camera controls

For example, set camera brightness to 64

v4l2-ctl -d /dev/video0 --set-ctrl=brightness=64

3.4 OpenCV Python

3.4.1 Install Opencv-Python

Check python pip version

python3 --version

pip --version

Run below command if not find the pip.

```
joez@joez-VirtualBox:~$ pip --version
Command 'pip' not found, but can be installed with:
sudo apt install python3-pip
```

sudo apt install python3-pip

Install opencv-python

sudo pip install OpenCV-python

*** If you en count download errors**

sudo pip install opencv-python -i https://pypi.tuna.tsinghua.edu.cn/simple

3.4.2 Set user controls parameters.

Below code sample set brightness as 64, contrast as 0

```
import cv2

# open video0
cap = cv2.VideoCapture(0)

# The control range can be viewed through v4l2-ctl -L
cap.set(cv2.CAP_PROP_BRIGHTNESS, 64)
cap.set(cv2.CAP_PROP_CONTRAST, 0)

while(True):
    # Capture frame-by-frame
    ret, frame = cap.read()
    # Display the resulting frame
    cv2.imshow('frame', frame)
    if cv2.waitKey(1) & 0xFF == ord('q'):
        break

# When everything done, release the capture
cap.release()
cv2.destroyAllWindows()
```

SAVE File name as 1.py, then run

```
sudo python3 1.py
```

3.4.3 Controlling values through code

```
import cv2
import time
# open video0
cap = cv2.VideoCapture(0)
cap.grab()

cap.set(cv2.CAP_PROP_AUTOFOCUS, 1)
time.sleep(2)
cap.set(cv2.CAP_PROP_AUTOFOCUS, 0)
time.sleep(2)
cap.set(cv2.CAP_PROP_FOCUS, 123)

cap.set(cv2.CAP_PROP_FRAME_WIDTH, 640)
cap.set(cv2.CAP_PROP_FRAME_HEIGHT, 480)

while(True):
    # Capture frame-by-frame
    ret, frame = cap.read()
    # Display the resulting frame
    cv2.imshow('frame', frame)
    if cv2.waitKey(1) & 0xFF == ord('q'):
        break

# When everything done, release the capture
cap.release()
cv2.destroyAllWindows()
```

SAVE File name as 2.py, then run

sudo python3 2.py

3.4.4 Controlling values through UI interface

```
import cv2
import argparse
import configparser
from pathlib import Path
import time

parser = argparse.ArgumentParser()
parser.add_argument("-v", "--vid", default="0", help="Video sourse, default 0")
parser.add_argument(
    "-f", "--auto_focus", action="store_true", default=False, help="Turn on auto focus"
)
parser.add_argument(
    "-c",
    "--config",
    default="focus.ini",
    help="Focus config file, default focus.ini",
)
args = parser.parse_args()

try:
    vid = int(args.vid)
except ValueError:
    vid = args.vid

config_path = (Path(__file__).parent / Path(args.config)).resolve().absolute()
print("config file :", config_path)

config = configparser.ConfigParser()

config.read(config_path, encoding="utf-8")

cap = cv2.VideoCapture(vid)
cap.grab()
cap.set(cv2.CAP_PROP_AUTOFOCUS, 1)
```

```
if not args.auto_focus and config.has_section("Focus"):
    auto_focus = (
        config.getint("Focus", "auto_focus")
        if config.has_option("Focus", "auto_focus")
        else 1
    )
    focus = (
        config.getint("Focus", "focus")
        if config.has_option("Focus", "focus")
        else int(cap.get(cv2.CAP_PROP_FOCUS))
    )
else:
    auto_focus = 1
    focus = None
print("config auto_focus = %s" % auto_focus)
print("config focus = %s" % focus)
print("*" * 10)

if not auto_focus:
    cap.set(cv2.CAP_PROP_AUTOFOCUS, 0)

time.sleep(2)
if focus:
    cap.set(cv2.CAP_PROP_FOCUS, focus)

cv2.namedWindow("frame")

def set_auto_focus(x):
    cap.set(cv2.CAP_PROP_AUTOFOCUS, x)

cv2.createTrackbar(
    "0: OFF\r\n 1: ON\r\nauto_focus",
    "frame",
    int(cap.get(cv2.CAP_PROP_AUTOFOCUS)),
    1,
    set_auto_focus,
)
```

```
def set_focus(x):
    cap.set(cv2.CAP_PROP_FOCUS, x)

cv2.createTrackbar("focus", "frame", int(cap.get(cv2.CAP_PROP_FOCUS)), 1023, set_focus)

while cap.isOpened():
    # cap frame-by-frame
    ret, frame = cap.read()
    if not ret:
        break
    focus = int(cap.get(cv2.CAP_PROP_FOCUS))
    cv2.setTrackbarPos("focus", "frame", focus)

    af = int(cap.get(cv2.CAP_PROP_AUTOFOCUS))
    cv2.setTrackbarPos("0: OFF\r\n 1: ON\r\nauto_focus", "frame", af)

    cv2.imshow("frame", frame)

    if cv2.waitKey(1) & 0xFF == ord("q"):
        break

# When everything done, release the cap
cap.release()
cv2.destroyAllWindows()

if not config.has_section("Focus"):
    config.add_section("Focus")

print("set auto_focus = 0")
config.set("Focus", "auto_focus", "0")

print("set focus = %s" % focus)
config.set("Focus", "focus", str(focus))

config.write(open(config_path, "w"))
```

SAVE File name as cvtui.py, then run

```
sudo python3 cvtui.py
```

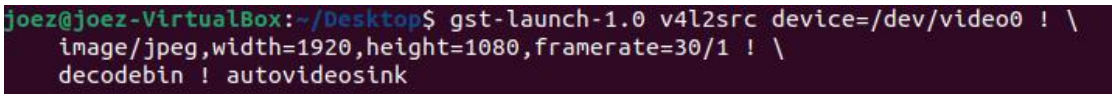

3.5 Gstreamer

GStreamer becomes a popular and powerful open-source multimedia framework to help users to build their own video streaming, playback, editing applications with various codec and functionalities on top of its high-level APIs.

3.5.1 Set Video Output Format

MJPEG

```
gst-launch-1.0 v4l2src device=/dev/video0 ! \
    image/jpeg,width=1920,height=1080,framerate=30/1 ! \
    decodebin ! autovideosink
```

YUV

```
gst-launch-1.0 -vv v4l2src device=/dev/video0 ! \
    video/x-raw,format=YUY2,width=1280,height=720,framerate=10/1 ! \
    videoconvert ! autovideosink
```

3.5.2 Streaming

MJPEG

```
# server
gst-launch-1.0 v4l2src device=/dev/video0 ! \
    image/jpeg,width=1280,height=720,framerate=30/1 ! \
    tcpserversink host=0.0.0.0 port=5001

# client
# change xxx.xxx.xxx.xxx to the actual ip address
```

```
gst-launch-1.0 -v tcpclientsrc host=xxx.xxx.xxx.xxx port=5001 ! \
      decodebin ! autovideosink
```

Save Video

```
gst-launch-1.0 v4l2src device=/dev/video0 !
image/jpeg,width=1280,height=720,framerate=30/1 ! jpegdec ! qtmux ! filesink
location=test.mp4 -e
```

Save Image

```
gst-launch-1.0 v4l2src device=/dev/video0 num-buffers=1 ! jpegenc ! filesink sync=false
location=file.jpg
```

Preview

```
gst-launch-1.0 v4l2src device=/dev/video0 !
image/jpeg,width=1280,height=720,framerate=30/1 ! jpegdec ! autovideosink
```

3.6 Read Serial Number

When you need to use multiple cameras,we need to use unique serial ID.

3.6.1 Linux udev

```
sudo udevadm info --query=all /dev/video0 | grep 'VENDOR_ID\|MODEL_ID\|SERIAL_SHORT'
```

```
joez@joez-VirtualBox:~/Desktop$ sudo udevadm info --query=all /dev/video0 | grep
 'VENDOR_ID\|MODEL_ID\|SERIAL_SHORT'
E: ID_VENDOR_ID=0bda
E: ID_MODEL_ID=3035
E: ID_SERIAL_SHORT=200901010001
```
