RainPoint Digital Timer Quick Installation Guide

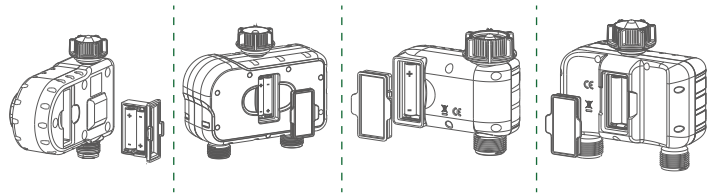

Note before installation

- Do not use tools for installation
- Clean the water inlet filter regularly
- For outdoor use with cold water only
- Please place the timer indoors in advance to prevent frost in anticipation of freezing weather.

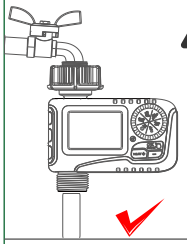

1 · Check the water inlet filter

2 · Correctly load the new alkaline dry batteries, cover tightly the battery compartment cover / tray

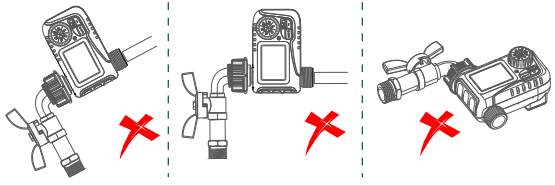

3 · Mount the timer on a 3/4" garden faucet

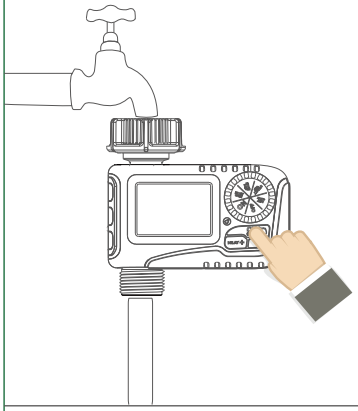

Warning

- Water inlet should be higher than all water outlets
- The display is as vertical as possible to the ground to prevent rainwater from accumulating and leaking into the interior

Tips: In order to extend the service life, we recommend that the product display is not exposed to the sun and heavy rain.

4 · Activate the valve in the timer

Turn the dial to ON, press and hold the OK button to manually turn the valve on or off for 3-5 times.

If you have a timer with 2 outlets, please activate the valves for each of the 2 outlets.

5 · Pre-use inspection/troubleshooting

Turn on the faucet and repeat the Step 4

Check: ① Whether the water flows out or shut off when the valve is opened or closed.

② Is there water leakage at the water inlet.

Congratulations, you have completed the installation of the timer, now please see the instructions to start programming your watering schedule.

If you have any questions, please contact the U.S. service hotline at **1-833-3815659** or email to **service@rainpointus.com**
